

SWIVEL JOINT

Swivel Joint

Swivel joints, with integral ball bearing, are manufactured on the basis of technologies from FMC, USA. Various models of swivel joints and their repair kits are available, suitable for normal or low temperature, or H₂S environments. Sizes ranging of swivel joint is from 1" to 4" , and rated WP ranging of swivel joint is from 2,000psi ~ 20,000psi.

Both long and short radius swivel joints are available. Long radius swivel joints can minimize fluid shock, and has better performance of resistance for scouring and erosion. Short radius swivel joints are mainly for low pressure operation due to limited installation space. Main styles of long radius swivel joint are style 10, style 20, style30, style 50, style 80, style 100 which can be used to replace FMC swivel Joint, SPM swivel joint, Anson swivel joint.
